EDUCATION

- **Information Technology Institute (ITI)** Alexandria, Egypt
Open Source Application Development Track - 9 Month Program Oct. 2023 – Jun. 2024
- **Alexandria University – Faculty of Science** Alexandria, Egypt
Bachelor of Software Engineering, SIM (Software Industry and Multimedia) Department Sept. 2019 – Jul. 2023
 - **Graduation Project:** Wasally Shipping System – CGPA: 3.9, Ranking 8th

WORK EXPERIENCE

- **Software Engineer at Objects** Jul. 2024 – Present
 - Led backend development of the RNTLS rental management platform in Laravel, implementing real-time WebSocket chat with Laravel Reverb, live GPS trip tracking with Google Maps (Roads API), Stripe recurring billing and commission-based payouts, Persona KYC/KYB verification, and Horizon-managed queues for payments, notifications, and background processing.
 - Worked extensively on e-commerce projects using Laravel and Wordpress, delivering high-quality solutions.
 - Developed a complete e-commerce system using Laravel Filament, with an intuitive dashboard for full administrative control and integration of multiple payment gateways, including PayPal, Stripe, and Cash on Delivery. Implemented the system using the Factory Design Pattern for better scalability and maintainability. [GitHub Link](#)
 - Designed and enhanced numerous WordPress plugins, with a focus on enhancing WooCommerce functionalities.
 - Improved a project integrating AI using the PoseNet model to detect body measurements for e-commerce applications, enhancing the user experience by providing accurate size recommendations. [GitHub Link](#)

PROJECTS

- **Rental Management Platform | *Laravel, PHP, MySQL, Redis, Stripe, Firebase, Laravel Reverb, Horizon***
 - Developed a multi-tenant rental management platform supporting Admin, Shop Owner, Car Owner, and Customer roles, covering vehicle onboarding, rental lifecycle, payments, and reporting.
 - Implemented real-time WebSocket communication using Laravel Reverb, enabling live chat between customers, car owners, and shop owners with read receipts and authenticated private channels.
 - Integrated Stripe for secure payments, including automatic recurring rental charges, security deposit holds, refunds, and commission-based payouts to car/shop owners, increasing payment success and payout automation by 50%.
 - Configured Laravel Horizon to manage and monitor Redis-backed queues for rental expiration, recurring Stripe charges, Twilio/Firebase notifications, and heavy data processing.
 - Built live trip tracking using Google Maps (Geocoding, Places, and Roads APIs), ingesting GPS points from the mobile app to compute routes with over 95% distance accuracy.
 - Integrated Firebase notifications and Twilio to deliver real-time rental updates, payment reminders, and verification messages.
 - Integrated Persona for KYC/KYB identity verification and combined it with Google Cloud Vision document analysis to automate ID and vehicle document checks.
- **Sizely App | *Laravel, PHP, JavaScript, TensorFlow.js, PoseNet, MySQL, Eloquent***
 - Developed a real-time pose detection app using TensorFlow.js and PoseNet with over 95% accuracy in identifying key joints.
 - Built a robust Laravel backend to manage user sessions, data processing, and ensure smooth operation across devices.
 - Enabled live webcam access for real-time feedback, enhancing user interaction and making it ideal for motion analysis.
 - Designed a responsive and user-friendly interface that guides users through pose detection with ease and clarity.
 - Deployed the application publicly at [Live Demo](#) with tested stability across various environments.
- **WeBuild Node Deployer | *Nest, MongoDB, React, TypeScript, Bootstrap, Jest, Prisma***
 - Enhanced authentication features using GitHub/GitLab credentials that streamlined user access and enhanced security.
 - Engineered repository connection functionality using GitHub/GitLab APIs that facilitated direct deployments.
 - Implemented environment configuration generation using .env files that simplified deployment setups for users.
 - Built deployment services using NestJS that automated application deployments, improving efficiency.
 - Monitored container events using real-time tracking that provided users with up-to-date system statuses.
 - See [frontend](#) and [backend](#) repositories for detailed implementation.
- **Scentence Perfume Shop | *Angular, Node.js, Express.js, MongoDB, Bootstrap***
 - Developed e-commerce backend using Node.js and Express.js that featured secure JWT authentication and streamlined order processing. See [frontend](#) and [backend](#) repositories for detailed implementation.
 - Added dynamic category filtering using Angular that provided a personalized shopping experience for users.
 - Integrated Stripe for smooth payment transactions using API that ensured secure and efficient financial operations.
 - Implemented Redis caching using Redis that improved system performance by approximately 50%.
- **Instagram Clone | *Laravel, PHP, MySQL, Eloquent, Bootstrap***
 - Utilized Laravel framework to implement features mirroring those found on the social media platform, enhancing user engagement and functionality.
 - Ensured seamless integration of user profiles, image sharing, comments, likes, and messaging using PHP and MySQL that provided a comprehensive social media experience.

COURSES

- **Open-Source Application Development Summer Training**, Information Technology Institute (ITI), 120 hr
- **NodeJS - The Complete Guide (MVC, REST APIs, GraphQL, Deno)**, Udemy, 40 hr
- **Software Methodology**, Pinerium
 - **Agile Software Development**: Covered principles and practices of Agile methodologies including Scrum and Kanban.
- **WordPress Course**, Udemy, 45 hr
 - Learned PHP, JavaScript, WordPress theming, Plugin development and WP REST API to create custom, interactive WordPress websites.

FREELANCE EXPERIENCE

- **Front-end Developer — Mostaqi Platform** *May 2024*
 - Enhanced Sala Platform by refining CSS and JavaScript for improved styling and performance.
- **Full-stack Developer — Mostaqi Platform** *May 2024 – Jun. 2024*
 - Integrated Google/Facebook authentication and developed an admin dashboard using React and Laravel.
 - Implemented an authorization system to secure data and manage access.

VOLUNTEERING ACTIVITIES

- **TEDx Alexandria** – Organization and Logistics Committee Staff Member
- **Alexandria Bibliotheca** – Volunteered to digitize and organize library materials

TECHNICAL SKILLS

- **Languages:** JavaScript, C/C++, SQL, HTML/CSS, PHP, Java, Bash, Python, Typescript
- **Frameworks:** Node.js, Express.js, Laravel, Eloquent, React, Angular, VueJs, Bootstrap, jQuery, Flutter, WordPress
- **Databases:** MongoDB, MySQL
- **Real-Time & Messaging:** Laravel Reverb, WebSockets, Pusher, Messaging Queues, Laravel Horizon
- **Tools:** Git/GitHub, Docker, Jira, Postman
- **Design and Technologies:** OOP, Design Patterns, Agile Methodologies, Data Structures, Algorithms
